**before using:** “start” the stormglass weather forecasting feature by shaking the stormglass up & down for 10-15 seconds.*

**mounting options:**

**standing mode** - to secure the stormglass to a counter or shelf:

1. unscrew the base from the stormglass.
2. insert the enclosed self-tapping screw into the base (screw head nests inside base) and screw it into the counter or shelf.
3. carefully unscrew the stormglass onto the base.

**wall or plaque mounting:**

1. unscrew the base from the stormglass.
2. mount the base to a wall or plaque by inserting the enclosed self-tapping screw into the base (screw head nests inside the base) and screwing it into the wall/plaque.
3. find the “mounting accessory” (in the packaging - it has an internally threaded ring attached to an externally threaded post) carefully screw the accessory’s post into the mounted base until snug. You may need to rotate the mounted base slightly so the stormglass is vertical once mounted.
4. invert the stormglass and carefully screw its post into the accessory’s ring.
5. position the stormglass at the preferred viewing angle, then lock that position by screwing the enclosed finial (brass cap with threaded post) into the top of the accessory until snug. (Caution: If you plan to unscrew it in the future, don’t tighten the finial too much).

*Note: if it has been shipped to you via air, it may take 24-48 hours to adjust to the local conditions*

**Lifetime Warranty**

**WEEMS STORMGLASS #200**

---

**The Weems Stormglass Mysterious Weather Predictor**

Since the 1700’s this interesting device has been used for predicting the weather one to two days in advance. It requires no batteries or programming and it works indoors or out. Changes occur in the crystal formations from day to day that signify what weather changes to expect.
