

Hand Bearing Compass (Item #2005)

Two methods of use:

1. To take a bearing of an object hold the compass at eye level and read down the line of sight. The number under the object is the bearing. The infinity prism provides in-focus compass readings from eye to arms length.
2. For quick orientation look down at the magnifying lens at the 3 o'clock position and read the **RED** number.

Maintenance

To keep clean, wipe the compass with a clean cloth regularly and use slightly soapy water to remove excess dirt as needed. Never use solvents such as alcohol, ether, benzene, gasoline, etc.

Lifetime Warranty

This compass is warranted by Weems & Plath for the duration of its lifetime. The warranty covers defects in manufacture and materials including bubbles that appear in the liquid-dampened card.

The warranty does not cover failure caused by the following circumstances:

Removal of compass from the protective rubber collar, dropping of the compass, failure resulting from repairs carried out by non-authorized personnel, exposure to temperatures over 140 degrees F, or storage in direct sunlight.

Questions? Problems?

Before returning to the store, please give our customer service team a chance to help. Call us toll free at **1.800.638.0428** or email us at **support@weems-plath.com** for prompt resolutions to questions regarding warranty, parts or operation of your Weems & Plath product. We are available to answer your questions: Monday through Friday 8:30am to 5:00pm EST.

Thank you!
